EDUCATION

Lake Forest College

Bachelor of Arts in Computer Science and Economics. Phi Beta Kappa; Dean's List; Presidential Scholarship; Plansoen Family Scholarship. GPA: 4.00.

Lake Forest, IL
December 2026

SKILLS

Programming Languages: Python, SQL, Java, Bash

Databases: PostgreSQL, SQL Server, MySQL, ChromaDB

Frameworks & Libraries: Flask, SQLAlchemy, Pandas, NumPy, scikit-learn

AI & Data Engineering: RAG, embeddings, ETL, data pipelines, model evaluation

Tools: Git, Docker, Linux, pytest, Power BI, Tableau, Excel

Languages: English (fluent), Russian (native)

EXPERIENCE

SQL Data Analyst Intern

August 2025 – December 2025

Oscillas Technologies

Chicago, IL

- Designed and implemented SQL reporting pipelines in PostgreSQL and SQL Server for high-frequency sensor, equipment-downtime, and reliability data.
- Built ETL and reconciliation logic across reporting intervals ranging from 1 to 24 hours, standardizing sensor calculations and reducing manual validation across downstream datasets.
- Identified and presented a reporting improvement projected to save approximately \$9,000 annually, translating technical findings into recommendations for engineering and business stakeholders.

PROJECTS

CodePath — Applications of AI Engineering (AI201)

June 2026 – August 2026

10-week, instructor-led applied AI engineering program

- Built a RAG assistant using Python, ChromaDB, MiniLM, and Groq with semantic retrieval, source attribution, and handling of unsupported queries.
- Developed a Flask content-provenance API with LLM classification, confidence scoring, rate limiting, audit logging, and verification endpoints.
- Contributed to the open-source PathReview codebase by adding deterministic snapshot tests for versioned prompt templates; validated with 42 passing tests.

Quantitative Data Research Scholar — Speculative Market Episode Detection & Early Warning

May 2025 – July 2025

James Rocco Quantitative Data Research Program

- Designed an end-to-end Python pipeline to identify speculative market episodes across 846,980 daily observations from 486 S&P 500 stocks spanning 2012–2022.
- Created rule-based buildup, burst, and five-day early-warning labels from rolling price, volatility, volume, and drawdown signals; engineered per-stock momentum, trend, and volatility features.
- Compared Logistic Regression, Random Forest, and Gradient Boosting models using a chronological train-test split; the best reduced-feature model achieved 0.79 event recall and 0.78 early-warning recall.

AI4ALL Ignite Accelerator — Federal Funds Rate Forecasting

May 2025 – August 2025

Project-based AI/ML accelerator

- Built and compared regression and ensemble models to forecast the Effective Federal Funds Rate using macroeconomic and lagged rate data.
- Engineered lag and rolling-window features for time-series prediction; evaluated model performance and presented findings and tradeoffs to faculty mentors.

ACTIVITIES & LEADERSHIP

Girls Who Code Chapter

December 2024 – May 2026

President

- Lake Forest College, Lake Forest, IL. Directed chapter programming, technical workshops, and campus outreach; mentored high school students in Python and AI through the Girls Who Code Mentoring Corps.
